

General session

Convenor: Ik-Hwan Lee

The General Session is designed to accommodate two types of papers.

1. Papers that do not fit into any of the designated sections. The goal is to encourage the submission of a wide variety of papers.
2. Papers that are of high quality but cannot be included in the appropriate sections due to space constraints. In such cases, section conveners may recommend these papers for inclusion in the General Session, with the author's consent.
